                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                     Riot B., Berche P., Simonet M.;
"Urease is not involved in the virulence of Yersinia
pseudotuberculosis in mice.";
Infect. Immun. 65:1985-1990(1997).
-!- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
-!- COFACTOR: Binds 2 nickel ions per subunit (By similarity).
-!- SUBUNIT: (Alpha, beta, gamma) (3) (By similarity).
-!- PTM: Lys-21 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).
-!- SIMILARITY: Belongs to the urease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-0CT-1989 (Rel. 12, Created)

```
The invention relates to novel genes ADA19629-ADA40565 and proteins CC ADA40566-ADA41501 for human secreted proteins, useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The polypeptides, nucleic acid molecules, antibodies or their crayapenty and agonists or antagonists that bind to the polypeptide are diagnosing or treating cancer or other hyperproliferative disorder. The polypeptides and nucleic acid molecules are also useful for detecting, prognosticating, treating or ameliorating cancer or other hyperproliferative disorders including neoplasms, autoimmune or other hyperproliferative disorders including neoplasms, autoimmune or other hyperproliferative disorders including neoplasms, autoimmune cor other hyperproliferative disorders including asthma or eczema, anaemia), haematopoietic or haematological disorders (e.g. anaemia, thrombocytopenia), allergic reactions including asthma or eczema, thrombocytopenia), allergic reactions including asthma or eczema, thrombocytopenia, allergic reactions including asthma or eczema, thrombocytopenia, allergic reactions including asthma or eczema, chilammatory disorders (e.g. achaematory disorders (e.g. achaematory disorders (e.g. atheroselerosis, wycarditis), infectious diseases (barcerial, tending and disorders of epithelial cell proliferation. The nucleic acids are also cuseful for thromsome identification, radiation hybrid mapping or long-range restriction mapping, as molecular weight markers, or as thybridization or diagnostic probes. The polypeptides and antibodies are this patent did not form part of the printed specification, but was for the patent did not form part of the printed specification, but was for the transfer or characterial for process or contained in electronic formant directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NGVCQYRCRYGKAPMPRPGYKPQEPNGCGSYFLGLKVPESMDLGIPAMTKCCNQLDVCYD 120

disorders such as arrhythmia.

```
sequence having at least 93% identity with a sequence comprising: (a) a polynucleotide (PN) fragment of a sequence comprising 40-1345 bp, or its allelic variant; (b) a PN fragment of the CDNA sequence; (c) a PN sequence encoding a polypeptide, or its fragment, domain, epitope or species homologue; or (d) a PN that hybridises under stringent conditions to any one of the sequences of (A) - (C). The nucleic acid is useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer, liver disorders such as hepatitis or neural disorders such as Alzheimer's disease. This is the amino acid sequence of a novel human secreted protein
                                                                                                          invention describes a new isolated nucleic acid molecule

Novel human secreted proteins, useful for detecting, preventing, diagnosing, prognosticating, treating and/or ameliorating cardiovascular

WO9924836-A1

Homo

```
The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary arteriosclerosis and myocardial ischaemia), neural disorders, immune system disorders, muscular disorders, pulmonary disorders, reproductive disorders, immune system disorders and/or cancerous diseases and conditions, for proliferative disorders and/or cancerous diseases and conditions, for infection, for treating thrombosis and arteriosclerosis, for treating thrombosis and arteriosclerosis, for treating or infection, for treating thrombosis and arteriosclerosis, for treating or controlleration of preventing neural damage which occurs in neuronal disorders or controlleration of the analysis of transplants or bone and periodontal regeneration and aid in tissue transplants or bone and in combination of haematopoietic cells and bone marrow cells when used in combination of haematopoietic cells and bone cannot expect the analysis or cannot be an arterior or preventing or prevent skin aging or hair loss, to marrow cells when used in combination of haematopoietic cells and primary or signals before transplantation of for supporting cell culture of primary corgans before transplantation or for supporting cell culture of primary corgans before transplantation or for supporting cell culture of primary corgans and parteriors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NGVCQYRCRYGKAPMPRPGYKPQEPNGCGSYFLGLKVPESMDLGIPAMTKCCNQLDVCYD 120

The invention relates to an isolated polymucleotide (I) comprising one of 245 sequences (ABQ31288-ABQ3532). Treating a condition comprising administering to a mammalian subject a composition comprising the protein composition comprising the protein composition composition to a mammalian subject a composition comprising the protein composition of an antibody (III) to (II).

(I) (II) and (III) are useful for diagnostic evaluation of disorders.

(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral calerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, immune deficiencies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NGVCQYRCRYGKAPMPRPGYKPQEPNGCGSYFLGLKVPESMDLGIPAMTKCCNQLDVCYD 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX84924) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 125 novel genes and their fragments (nucleic acid sequences: AAX84933-X85057; amino acid sequences AAX27567-Y27933) which are useful for preventing, treating or ameliorating medical conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the expressed in (see AAX84933 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NGVCQYRCRYGKAPMPRPGYKPQEPNGCGSYFLGLKVPESMDLGIPAMTKCCNQLDVCYD 120

Query Match Matches RESULT 8 ADA40769 g ₽ q d à 8 diagnosing, treature to 3x inew numan secreted polypeptides useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or neurodegenerative disorders, or polypeptides comprising an amino acid sequence at least 95% identical to the new sequences. The polypeptides, artibodies or antibody fragments that bind to the polypeptides, artibodies or antibody fragments that bind to the polypeptides, cardis encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune allergy), cancers (e.g. gastric, ovarian or lung cancer), CNS disorders (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative cardiovascular disorders (e.g. athracenting or phypotides are useful for chromosome identification, chromosome cardiovascular disorders (e.g. athrace) or myocarditis). The polymucleotides are useful for chromosome identification, chromosome or antisense DNA or RNA, in gene therapy, for identifying and shybridization or probes: The polypeptides are useful for as molecular weight markers on probes: The polypeptides are useful for as molecular weight markers on probes: sodium dodecyl sulfare-polyacrylamide gel electrophoresis (SDS-PAGE) gels, to raise antibodies, for testing biological activities, and for tracting or preventing neural disorders, immune system disorders, muscular, reproductive, gastrointesinal, pulmonary, cardiovascular, renal, proliferative and/or cancerous diseases. This sequence corresponds cytostatic; cerebroprotective; neuroprotective; noctropic; cardiovascular; antiarreriosclerotic; gene therapy; human secreted protein; immune disorder; inflammation; respiratory disorder; cancer; cas disorder; neurodegenerative disorders; inflammatory bowel disease; nephritis; Crohn's disease; asthma; allergy; multiple sclerosis; ischaemic brain injury; Parkinson's disease; Alzheimer's disease; atherosclerosis; myocarditis; chromosome mapping; triple helix formation; antisense gene therapy; forensic biology. renal, proliferative and/or cancerous diseases. This sequence correspond to one of the polypeptide of the invention. Note: The sequence data for invention relates to 592 new human secreted polypeptides useful for New human secreted polypeptides and polymucleotides, useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or immunosuppressive; antiinflammatory; antiasthmatic; antiallergic; Claim 13; SEQ ID NO 1111; 1754pp; English. (first entry)

The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind to the polypeptide are useful for preparing a diagnostic or pharmaceutical composition for diagnosing or treating cancer or other hyperproliferative disorder. The polypeptides and nucleic acid molecules are also useful for detecting,

prognosticating, treating and/or ameliorating cardiovascular

```
preventing, diagnosing, prognosticating, treating or ameliorating cancer or other hyperproliferative disorders including neoplasms, autoimmune disorders (e.g. diabetes, rheumatoid arthritis, systemic lupua expremantosm, multiple sclerosis, autoimmune thyroiditis or haemolytic anaemia), haematopoietic or haematological disorders (e.g. anaemia, thrombocytopenia), allergic reactions including asthma or eczemia, thrombocytopenia), allergic reactions including asthma or eczemia, conflammatory disorders (e.g. ischaemia-reperfusion injury, inflammatory bowel disease or Crohn's disease), neurodegenerative disorders (e.g. Alzheimer's disease) neurodegenerative disorders (e.g. altersoclerosis), myocarditis), infectious diseases (bacterial, centernal infections including HIV/AIDS), or wound healing and disorders of epithelial cell proliferation. The nucleic acids are also consful for chromosome identification, radiation hybrid mapping or longrange restriction mapping, as molecular weight markers, or as hybridization or diagnostic probes. The polypeptides and antibodies are hybridization or diagnostic probes. The polypeptides and antibodies are the tissues immunohistochemistry assays. The present invention relates to novel human secreted proteins (ABR47633-C) ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic corporation for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary disorders muscular disorders, immune asteriosclerosis and myocardial ischaemia), neural disorders, immune system disorders, pulmonary disorders, reproductive disorders, pulmonary disorders, renal disorders, coronary proliferative disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating or preventing neural damage which occurs in neuronal disorders or infection, for treating thrombosis and arteriosclerosis, for treating or neurodegenerative conditions such as Alzheimer's disease and Parkinson's consumpants or bone grafts, to prevent skin aging or hair loss, to estimulate growth and differentiation of heamatopoictic cells and bone stimulate growth and differentiation with other cytokines, to maintain organs before transplantation or for supporting cell culture of primary congans before transplantation or for supporting cell culture of primary congans before transplantation or for supporting cell culture of primary congans tem cells, or to modulate mammalian characteristics or metabolism. Note: The sequence data for this patent was published in the contraction of contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 NGVOQYRCRYGKAPMPRPGYKPQEPNGCGSYFLGLKVPESMDLGIPAMTKCCNQLDVCYD 120

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detection of the genes of probes and primers for gene analysis and for and related species, to study polymorphisms; for gene analysis and for certain application of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of IP. Illuminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. crecombinant production of the proteins, particularly toxins and recombinant production of the proteins, particularly toxins and complete antibacterials useful as insecticides, bactericides and fungicides. The are sensitive to P. luminescens encoded toxins or antibiotics) and as are sensitive to P. luminescens-encoded toxins or antibiotics) and as are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence companies as a model (particularly plague and whooping cough). This cough.
                                                                     Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Clahl2; Clah 8; Cladosporium herbarum allergen; diagnosis; therapy; stimulate; proliferation; interleukin production; T cell; tolerance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions, and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                   New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.

Spores of Cladosporium herbarum are the most common fungal spores found in the air; they can cause allergic reactions. Various Clah allergens and sequences encoding them have now been isolated. The mature Clahl. allergen has mol. wt. 11 kD and is encoded by CDNA sequence AAQ87846. The allergen has homology to the ribosomal protein RLA2. Potential epitopic subfragments were identified by computer analysis of the amino acid sequence. See AAR72670-R72674 for potential B-cell epitopes and AAA72675-R72677 for potential T-cell epitopes. (Updated on 25-MAR-2003 to correct pN field.) (Updated on 16-OCT-2003 to standardise OS field)
                                                                                     AAR99963-65 are B-cell epitopes of Cladosporium herbarum allergen, Clahl2 (AAR99961). Clahl2 and its fragments are useful in diagnosis and therapy, esp. in vitro detection of allergy to Clah812 by reactivity with serum rgs or cellular reaction to these allergens. Therapeutically they may betimulate proliferation and interleukin prod. In Tells, in vitro or in vivo, and also block T cells (induce tolerance of allergen-specific T cells). The use of allergen-deriv, but non-anaphylactic peptides allows on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Allergens derived from Cladosporium herbarum spores - also recombinant DNA for expressing the allergens, useful for in vitro allergy detection
DNA encoding allergens of Cladosporium herbarum - useful for diagnosis and treatment of allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fungal spore; allergen; Clahil; allergy; ribosomal protein; RLA2; B-cell epitope; antigenic region.

The invention relates to novel human secreted proteins. The protein is useful for diagnosing a pathological condition or the protein is useful for diagnosing a pathological condition in a subject. The protein is useful for diagnosing a pathological condition in a subject. The protein is useful for diagnosing pathological condition or a susceptibility to pathological condition in a subject. The protein is useful as reagents for diagnosing pathological condition in a subject. The protein is useful as reagents for differential identification of the tissues or cell types present in a condition. The protein is useful as reagents for differential identification of the tissues or cell types present in a been to decreased levels of polymetries e.g. insulin, to supplement condition and the protein can be administered to patients having the hand asmple. The protein can be administered to patients having the hand asmple. The protein is different polymetries, e.g. haemoglobin S absent or decreased levels of different polymetries, e.g. haemoglobin S contained the activity of a polymetries e.g. insulin, to supplement of inhibit the activity of a polymetries of soluble tumour necrosis factor (TNF) or receptors used in reducing inflammaries bound receptor by competing with it for free ligand e.g. soluble tumour necrosis factor (TNF) or response to proliferative cells or tissues. The protein and the mucleic response to proliferative cells or tissues. The protein and the mucleic cresponse to proliferative cells or tissues. The protein and the mucleic of immune system involving abnormal growth of specific types of cells as confined and or diseases, limb and discorders and/or conditions of preventing and/or disquosing discorders including neoplasms, cardiovascular discorders (such as peripheral artery disease, limb cells and diseases, parkinson's disease, wund hearing and cells proliferation, neurological diseases (such as Alzheimer's function associated polymetries, tumour acid sequence of a novel human cells protein associated p Novel human secreted proteins useful for treating and/or diagnosing disorders of immune system, cardiovascular disorders such as peripheral artery disease, neurological diseases such as Alzheimer's disease. The sequence is that of a proteolytic fragment of a new topoisomerase (TI) from Methanopyrus kandleri. The TI is a type 1-group B TI whose reaction procedes via a transient single stranded break which changes the linking number in steps of one and operates on duplex DNA. The TI can be used for relaxing supercoiled DNA or for unlinking closed circular DNA. See also AAR60684-90. (Updated on 25-MAR-2003 to correct PN field.) II, supercoiled DNA; relaxing; closed circular DNA; sequencing; cloning; amplification; probe. New thermostable DNA topoisomerase - obtd. from Methanopyrus kandleri, used for relaxing supercoiled DNA and unlinking closed circular DNA. Length 35; 3.6%; Score 7; DB 2; 100.0%; Pred. Patent No. 5543264
GENERAL INFORMATION:
APPLICANT: Anderson, Carl W.
APPLICANT: Mangel, Walter F.
TILLE OF INVENTION: Co-Factor Activated Recombinant
TITLE OF INVENTION: Adenovirus Proteinases (As Amended)
NUMBER OF SEQUENCES: 45
CORRESPONDENCE ADDRESS:

GENERAL INFORMATION:

PAPPLICANTY: Lynn Doucette-Stamm et al

TITLE OF INVENTION: UNCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTERCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ENTERCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: UNMERR: US/09/134,000C

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT APPLICATION NUMBER: US 60/055,778

PRIOR PRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SEQ ID NO 3705

LENGTH: 191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

Patent No. 5891218

GENERAL INFORMATION:

APPLICANT: Tomasetto, Catherine

APPLICANT: Basset, Paul

APPLICANT: Byre, Jennifer

TITLE OF INVENTION: Isolated Nucleic Acid Molecules Useful

TITLE OF INVENTION: as Leukemia Markers and in Breast Cancer Prognosis

NUMBER OF SEQUENCES: 124

US-09-250-611-9

Sequence 9, Application US/09250611

Patent No. 652823

GENERAL INFORMATION:

APPLICANT: Byrne, Jennifer A.

APPLICANT: Basset. Paul

TITLE OF INVENTION: Members of the D52 Gene Family

FILE REFERENCE: 1383.021001

CURRENT FILIG DATE: 1999-02-17

NUMBER OF SEQ ID NOS: 108

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 9

LENGTH: 204

Acidic ribosomal protein P2.e.B, cytosolic - yeast (Saccharomyces cerevisiae)
N;Alternate names: acidic ribosomal protein P2.alpha; protein D9481.1; protein YDR382w; 1
C;Species: Saccharomyces cerevisian
C;Date: 31-Oct-1980 #sequence revision 31-Mar-1992 #text_change 21-Jul-2000
C;Accession: A35109; A28104; A02776; S61177; S69666
R;Newton, C.H.; Shimmin, L.C.; Yee, J.; Dennis, P.P.
J. Bacteriol. 172, 579-589; 1990
A;Title: A family of genes encode the multiple forms of the Saccharomyces cerevisiae ribc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Wolecule type: DNA

Yolin-dependent kinase inhibitor protein [imported] - Arabidopsis thaliana
NyAlternate names: hypothetical protein F2686.8
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 12-Feb-1999 #sequence_revision 12-Feb-1999 #text_change 16-Feb-2001
C;Accession: T01132; F84624
R;Rounsley, S.D.; Kaul, S.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, submitted to the EMBL Data library, June 1998
A;Bescription: Arabidopsis thaliana chromosome II BAC F2686 genomic sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  acidic ribosomal protein P2 - fungus (Cladosporium herbarum)

Submitted (FEB-1990) to the EMBL/GenBank/DDBJ databases.

-! FUNCTION: THIOLD PROTEAGE CLEAVING SPECIFIC GIV-ALA PEPTIDES IN A
-! FUNCHION: THIOLD PROTEAGE CLEAVING SPECIFIC GIV-ALA PEPTIDES IN A
IIA AND MU) WHICH ARE REQUIRED FOR VIRION MATURATION. ALSO CLEAVES
HOST CELLS CYTOSKELFATA KERATINS R. AND KIS.
-! CATALYTIC ACTIVITY: Cleaves proteins of the adenovirus and its
host cell at two consensus sites: -Yaa-Xaa-Gly-Gly-|-Xaa- and
-Yaa-Xaa-Gly-Xaa-|-Gly- (in which Yaa is Met, Ile or Leu, and Xaa
                                                                                                                                                                 Gaps

--- SUBUNIT: Pl and P2 exist as dimers at the large ribosomal subunit.
--- FMP. Phosphorylated (By similarity)
--- FMP. Phosphorylated (By similarity)
--- MISCELLANEOUS: Yeasts contain 4 individual small ribosomal A proteins (RPA) which can be classified into two couples of similar broteins (RPA) which can be classified into two couples of similar one of the two A proteins present in multicellular organisms.
--- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Newton C.H., Shimmin L.C., Yee J., Dennis P.P.; and family of genes encode the multiple forms of the Saccharomyces cerevisiae ribosomal proteins equivalent to the Escherichia coli L12 protein and a single form of the L10-equivalent ribosomal protein."; J. Bacteriol. 172:579-588 (1990).

-!- SUBUNIT: Pl and P2 exist as dimers at the large ribosomal subunit.
-!- ALLERGEN: Causes an allergic reaction in human.
-!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-0CT-1996 (Rel. 34, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein synthesis.
-!- SUBUNIT: Pl and P2 exist as dimers at the large ribosomal subunit.
-!- MISCELLANEOUS: Yeasts contain 4 individual small ribosomal A proteins (RPA) which can be classified into two couples of similar but not identical sequences. Each couple is distinctly related to one of the two A proteins present in multicellular organisms.
-!- SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Newton C.H., Shimmin L.C., Yee J., Dennis P.P.;
"A family of genes encode the multiple forms of the Saccharomyces cerevisiae ribosomal proteins equivalent to the Escherichia coli L12 protein and a single form of the L10-equivalent ribosomal protein.";
J. Bacteriol. 172:579-588(1990).
                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=88243786; PubMed=2837476; Remacha M., Saenz-Robles M.T., Vilella M.D., Ballesta J.P.G.; Remacha M., Saenz-Robles M.T., Vilella M.D., Ballesta J.P.G.; "Independent genes coding for three acidic proteins of the large ribosomal subunit from Saccharomyces cerevisiae."; J. Biol. Chem. 263:9094-9101(1988).

Isolation and characterization of peptides and the complete amino acid sequence."; and the complete amino acid sequence."; piochim. Biophys. Acta 67:116-24(1981).

-1. FUNCTION: Plays an important role in the elongation step of protein synthesis.

-1. SUBUNIT: Play By Exist as dimers at the large ribosomal subunit.

-1. PTM: Phosphorylated (By similarity).

-1. PTM: Phosphorylated (By similarity).

-1. PTM: RocellanBoUS: Yeasts contain 4 individual small ribosomal A proteins (RPA) which can be classified into two couples of similar but not identical sequences. Each couple is distinctly related to one of the two A proteins present in multicellular organisms.

-1. SIMILARITY: Belongs to the L12P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-: FUNCTION: Plays an important role in the elongation step of protein synthesis.
-: SUBNIT: Pland P2 exist as dimers at the large ribosomal subunit.
-: PTM: Phosphorylated (By similarity).
-: PTM: Causes an allergic reaction in human.
-: SIMILARITY: Belongs to the Li2P family of ribosomal proteins.
-: CAUTION: Two distinct proteins have been termed allergen
Cla h 4.

                 -!- FUNCTION: Removes residual C-terminal Arg or Lys remaining after
                                                  initial endoprotease cleavage during prohormone processing.
-!- CATALYTIC ACTIVITY: Peptidyl-L-lysine (or L-arginine) + H(2)O = peptide + L-lysine (or L-arginine).
-!- SUBCELLULAR LOCATION: Secretory granules of pancreatic islets, adrenal gland, pituitary and brain.
-!- SIMILARITY: Belongs to peptidase family M14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..
